Tori Adams

Dallas, TX | 303-386-2027 | torir.adams@gmail.com | adams-tee.onrender.com | github.com/adams-tee

PROFESSIONAL SUMMARY

Full Stack AI Engineer experienced in building secure, scalable web applications and AI-driven microservices using Python, JavaScript, TypeScript, Java, and Docker across AWS and GCP. Core technical background spans LLM-powered applications, stateful multi-agent systems (LangGraph, MCP), and scikit-learn models alongside clean REST APIs and relational databases (MySQL). Known for strong ownership, high code quality standards, and clearly communicating intricate AI and system architectures across cross-functional engineering teams.

TECHNICAL SKILLS

Frontend: React, Angular, Django

Backend & Languages: Node.js, TypeScript, JavaScript, Java, Python, Spring Boot, APIs, Powershell, Bash, RESTful API's

Databases: SQL, MongoDB

AI / ML: LangChain, OpenAI, scikit-learn, TensorFlow, Pandas, Numpy, RAG

Cloud / DevOps: Linux, AWS, VMware, Docker, Ansible, CI/CD pipelines, microservices, TCP/IP

Networking: TCP/IP, DNS, DHCP, Firewalls, VPN, Switches, Cabling

PROFESSIONAL EXPERIENCE

AI Engineer (Freelance) *Jan 2025 – Present*

- Built Python services around LLM APIs, using Pydantic schemas to validate responses and ensure consistent, structured outputs for production features.
- Trained and evaluated scikit-learn models (classification and regression), handling feature scaling and hyperparameter tuning to support data-driven tooling.
- Built a resume-matching tool using SBERT embeddings and NumPy cosine similarity to calculate semantic relevance scores across candidate profiles

Software Security Engineer III | Sealing Tech *Apr 2024 – Jan 2025*

- Designed and implemented containerized Linux environments for enterprise monitoring and log analysis tools (Splunk)
- Built automated software provisioning pipelines using Python and Ansible, ensuring repeatable, reliable virtual environments allowing to strengthen hands-on experience with infrastructure and third-party system integration
- Took ownership of secure infrastructure systems end-to-end, leading technical reviews and maintaining clear, up-to-date system documentation for technical and non-technical stakeholders

Full Stack Developer | TaxCredible *Sep 2023 – Dec 2023*

- Designed, built, and maintained core RESTful APIs in Node.js, focused on data modeling integrity and query performance against a MySQL database
- Ship production-grade software and maintained a full-stack TypeScript application, debugging and resolving frontend and backend issues to improve overall application stability

Full Stack Developer | Deloitte *Jul 2021 – Sep 2023*

- Engineered high-performance, enterprise-level Java applications within a service-based architecture, contributing to translating Figma Designs into responsive UI
- Developed reusable React components to replace Angular modules
- Contributed to a large-scale migration effort, improving ADA web standards

Full Stack PHP Developer | Anne Holland Ventures *Mar 2019 – Jun 2021*

- Integrated REST APIs and improved internal processes for stakeholders
- Developed and enhanced 6+ Wordpress B2B sites with custom PHP plugins
- Ensured database security preventing breaches and maintaining data integrity

Network Engineer | Faction *Oct 2017 – Aug 2018*

- Deployed physical data center infrastructure that includes enterprise switches, NAS arrays, and structured cabling
- Configured TCP/IP networking protocols and troubleshot complex hardware/software device issues to minimize system downtime
- Monitored system behavior and network uptime using enterprise ticketing software, collaborating with teams for rapid incident response

EDUCATION

B.S. Computer Science — Southern New Hampshire University

A.S. Information Technology — Community College Aurora
